

“Better seals, better life”

ISSUE 1/2010

Success in lab sector

Organizations use Roxtec cable seals to improve safety and prevent air leaks in air-tight laboratories and clean rooms. The seals keep air-tight in both negative and positive pressure environments. Containment laboratory specialist MSS Clean Technology in the UK says “Roxtec was the ‘safe’ choice to securely seal the services entering the CL3 rooms through our laboratory wall and ceiling system”.

Solutions for data centers

IT service company Tieto transforms a former military installation in the Swedish rock into a scalable cutting-edge data center. Roxtec seals keep gas-tight, which is essential for security and efficient cooling. The seals’ built-in spare capacity allows for upgrades and new customers in the data center – without adding costs or risking business continuity for existing customers.

New distributor in Kenya

The partnership between Roxtec and Millenia Ltd makes Roxtec sealing solutions available all over Kenya. The companies have signed an exclusive distributor agreement.

THE WORLD EXPO 2010 in Shanghai, China, is focusing on technical innovations for sustainable urbanization. Its environmental theme is “Better city, better life”. All over the dynamic city, Roxtec cable and pipe seals are used in infrastructure projects with the purpose of

improving living conditions. It is amazing to see how small components such as high quality seals can solve problems in growing cities. In fact, Roxtec seals are present worldwide in a variety of projects reflecting sustainable growth and the development towards

increased safety and efficiency – within energy production, power transmission, oil & gas, shipbuilding, waste water treatment, labs, and data centers. Many projects cross borders and showcase Roxtec as a global company with a very strong local presence.
