

Roxtec services and software

Installation training, supervision, quality inspection and management software for securing your cable and pipe transits.

As world leader in cable and pipe seals, we provide services and software solutions that add value. You can ensure safety and long-term operational reliability by benefitting from our installation training, onsite supervision and inspections as well as by using our digital tools for transit design and control over time. When all parties can perform their work efficiently, you increase quality and save money.

Installation training: Set your team up for success

Practice makes perfect. Trained installers do better, faster and safer cable and pipe seal installations.

A Roxtec installation training includes:

- Step-by-step demonstrations of products used in your project
- Hands-on training on site for minimum impact on the daily work
- Approval of attendance

You will minimize installation errors, reduce rework, and maximize safety and efficiency.

Supervision: Expertise on site when it matters the most

With our supervisors on site, the entire transit installation process is handled with precision.

We provide real-time guidance and support to:

- Address questions and sealing challenges as they arise
- Verify that installations meet standards and requirements
- Simplify teamwork for installation firms and production management

You will save time and gain peace of mind, knowing that initial installations are correctly done.

Inspections: Confidence in a job well done

Guarantee the long-term reliability of your sealing solutions with our inspection services.

In newbuilds and retrofit projects, our certified inspectors:

- Conduct a thorough visual inspection of the status of the transits
- Identify any issues that could impact performance
- Provide a detailed report in Roxtec Software Suite™ with recommendations of improvements.

An inspection gives you a full overview of the installation quality of your asset and a crucial step to maintaining operational safety.

Roxtec Software Suite™. Ensure total control with our digital tools

Roxtec software simplify work with everything from design, drawings and certificates through to installation, quality checks and mandatory documentation. You will have full control, in real-time, from planning and construction through to upgrades.

Roxtec Transit Designer™

Roxtec Transit Designer™ is our free web-based design tool that enables you to quickly and easily design hundreds of cable and pipe transits.

- Select the right solution
- Save time, reduce risks
- Enhance and streamline international collaboration

Roxtec Transit Build™

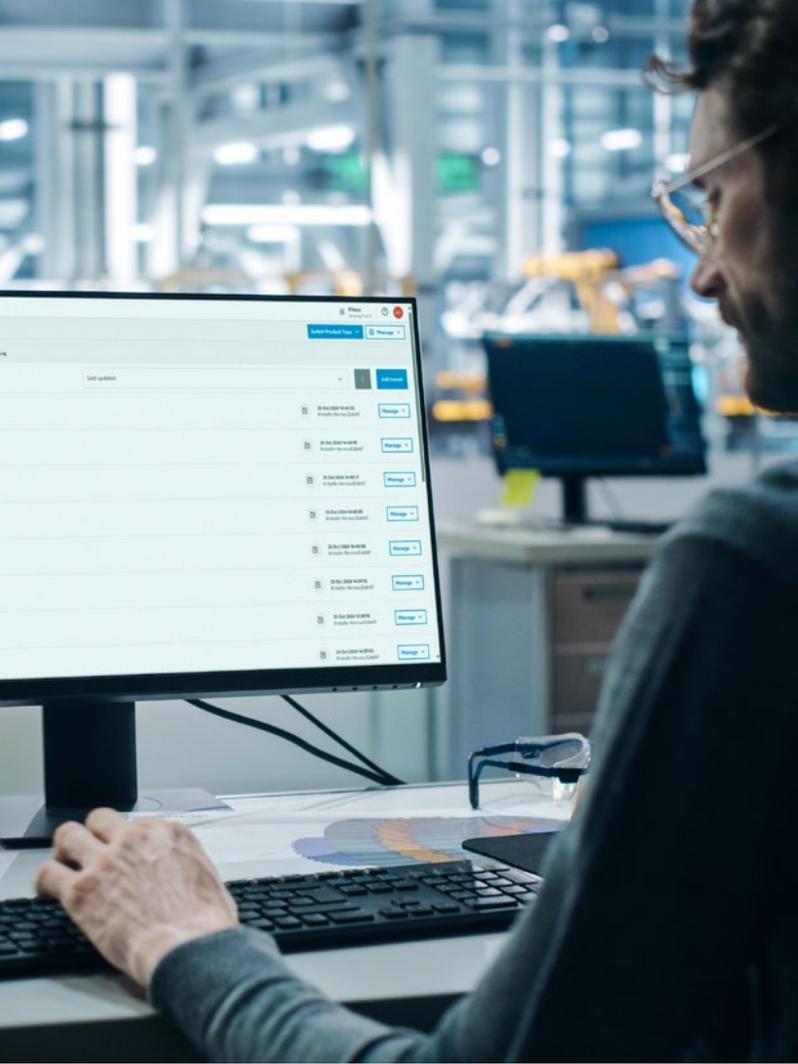

Roxtec Transit Build™ simplifies cable and pipe seal installation. It ensures quality and increases efficiency in installation and certification processes.

- Administer and disseminate all documentation.
- Ensure high-quality installations to facilitate an expedited and efficient process.
- Execute modifications effectively to mitigate expenditures.

Roxtec Transit Operate™

Roxtec Transit Operate™ is a digital management system developed to enable complete control of all transits through the entire lifecycle of your asset.

- Centralize all essential documents to access all relevant information.
- Verify transit status throughout the asset's lifecycle.
- Share the latest updates with relevant stakeholders.
